

Live Cloud Application: Hosted on GitHub Pages

<https://jraltd.github.io/cfm-Quote-Data-Tool/>

An offline-capable, standalone quotation workbench and pricing matrix application for **cfm Distributors, Inc.** commercial equipment, residential split systems, packaged rooftop units (RTUs), and paired accessories. Compiles equipment catalogs, pricing schedules, and compatibility tables into a single portable application that runs locally in any web browser with zero external dependencies.

Core Capabilities

Catalog Search & Filtering

- Sub-millisecond instant search across model numbers, descriptions, and equipment families (press `/` shortcut).
- Dedicated tabs: Commercial RTUs, Residential Splits, Commercial Splits (2.5–50T), Ductless/VRF, and Applied Equipment.
- Quick filters for new low-GWP **R-454B (A2L)** systems vs. legacy **R-410A**, plus stock status indicators.

Paired Accessory Engine

- **1,608 distinct accessories** mapped across 14 equipment series (Sunline, Sun Pro, SunCore, SunChoice, Sun Select, Sun Premier, LX Series, Reznor, PTAC, Boilers, LG).
- One-click **Accessories** modal with category filtering (Curbs, Economizers, Hail Guards, Electrical, Sensors).
- Smart quote recommendations when equipment units are added.

IPA Pricing Matrices & Calculator

- Multiplier tables for In-Stock (Schedule IPA 753978) and Factory Order equipment across contractor discount tiers (8% to 21%).
- Real-time margin calculator computing Buy Cost, Target Sell Price, Dollar Margin, and Gross Margin %.
- Visual column highlighting for active discount schedules.

Contractor Proposal Builder

- Customer-ready proposal builder with contractor details, job information, and editable line items.
- Automated freight calculations adhering to cfm policy tiers (\$12,000+ orders qualify for free standard freight).
- One-click Print/PDF export with print stylesheet protection (forces clean black-on-white) and CSV download.

Dual Theme Engine

Engineered with both **Dark Mode** and **Light Mode**, accessible via a one-click header toggle button ( **Dark Mode** /  **Light Mode**). Includes automatic operating system preference detection (`prefers-color-scheme: dark`) and browser persistence. Print stylesheets automatically protect printed documents to clean white paper.

File Structure

File Name	Type	Description
index.html	Web App	Root endpoint for GitHub Pages deployment (~2.5 MB).
cfm_quote_tool.html	Web App	Standalone offline application distribution with embedded database.
generate_app.py	Python Script	Compiler script that parses workbook data and rebuilds the application.
Quote Data For Release 092126.xlsx	Excel Workbook	Complete 32MB source workbook containing equipment catalogs and pricing.
cfm_logo.png	Brand Asset	Official cfm Distributors logo graphic (embedded as Base64 in app).
README.md	Documentation	Repository readme and GitHub summary documentation.

Rebuilding the Application

To rebuild `cfm_quote_tool.html` and `index.html` from a refreshed source workbook:

```
# Requires Python 3.8+ and openpyxl
python generate_app.py
```

Compilation Pipeline Details:

- 1. **Data Extraction:** The script reads and cleans equipment worksheets, parses pricing matrix schedules, and filters out excluded internal administration sheets.
- 2. **Accessory Schedule Pairing:** Automatically correlates 1,608 accessories with their matching equipment families (Sunline, Sun Pro, SunCore, SunChoice, Sun Select, Sun Premier, LX Series, and split systems).
- 3. **Zero-Dependency Output:** Compiles all catalog data, accessory maps, and brand graphics into self-contained HTML files (`cfm_quote_tool.html` and `index.html`) requiring no server or internet connection.
